Story

- Environment, Setting, Objects, Characters and Themes
 - Generic grassy area
 - Hills for some elevation changes
 - Pits
 - Enemies, do not charge at player simply do damage on contact
 - Peaceful
- What, Where, Who and Why of level
 - Running and jumping through the level to reach the end, collecting coins along the way
 - Peaceful grassy hills
 - The player character, Not-Mario
 - In order to get a good score by killing enemies and collecting coins.

The very simple story of the game is as simple as the simple platforming series that inspired it. The player takes the role of the Mask Man, and he's hungry. But, tragedy of tragedies, he doesn't have any food to eat! Worse still, even if he did manage to find something like some delicious fruit to eat, we wouldn't even have a bowl to eat it out of. Now, in order to save the Mask Man from the horror of mild hunger, the players must platform through a simple level in order to acquire a trophy shaped bowl, and pick up as many delicious pineapples along the way!

Projected look of the finished game

Example of the appearance of this era of Mario platformers

Mario level design, individual sections of levels

Block jumping section

Safe, but interesting, section

Precise block jumps

Classic block jumps w/ enemies

Valley w/ enemies

Sprites needed

Mario

Goomba

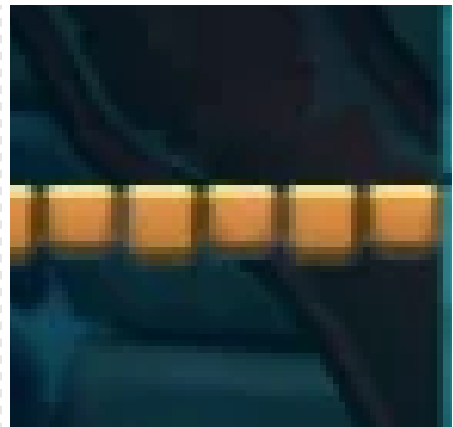

Grassy dirt tile

Pipe

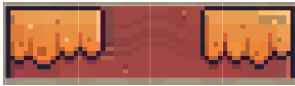

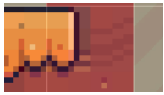

Coin

One-way platform

Program / Gameplay Requirements

- Gameplay Requirements and features
 - Simple, linear level design
 - Simple enemies
 - Coin / collectables
 - 1 mid level checkpoint
 - Not very challenging
- 3 pillars of play for level, focus or core
 - Running
 - The game must feel quick and flow nicely. It cannot get bogged down or feel slow, and the player must feel like they are running through the level most of the time
 - Jumping
 - The level must encourage and require a fair amount of jumping. This will help keep the player feeling light and bouncy and fun, as supposed to the other extreme in game without a jump at all, where the player can feel heavy and bulky.
 - Collectables
 - There must be many collectables throughout the level and spread along alternative or optional paths. This will help make the level feel fuller and larger, without actually making it any slower to get through for players just trying to go fast through the level.
- Asset list

- 9x9 terrain tiles 
- 2 floor edge tiles 
- 2 floor edge wall edge tiles 
- Single tile wide wall (left and right edges) 
- Single tile wide floor (left and right edges) 
- Single bottom tile (floating section) 
- Inside corner middle 

- 1-way platforms (left, right, middle)
